CapriMAX™

INNOVATION & PERFORMANCE

The CapriMAX milking cluster is the ultimate milking solution for progressive dairy goat farmers.

Numerous innovations ensure best results in terms of milking speed and quality, ruggedness and comfort.

Your milking operation will achieve new levels of efficiency and profitability.

Discover optimized milking

- **Unrivalled milking speed** - Due to the patented alternative air inlet valve on each teat cup. This system ensures perfect stability of the teat end vacuum and unrivalled milking quality notably by eliminating the phenomenon of back-spray.
- **Attach quickly and efficiently** - Two perfectly integrated, independent automatic valves make it possible to milk each teat independently while maintaining an excellent milk flow.
- **Simple and robust design** - Claw and shells made from highly resistant PPSU resin; reduced number of parts and therefore simplified maintenance without tools.
- **Ergonomy and comfort** - Designed for easy handling; optimized teat cup size.
- **Efficient cleaning** - Innovating jetters ensure the perfect functioning of the milking clusters at each milking shift.
- **Versatility** - Perfectly suited for all milking parlour types. It offers the same milking performance regardless of milking parlour configuration.
