BOUMATIC RANGER

SELF-GUIDED

ROBOTIC FEED PUSHER

The BouMatic Ranger is a self-guided robot, which pushes the ration multiple times a day. It allows you to reduce labour costs and positively impact milk production as full consumption of ration increases milk yield by up to 1 liter per cow and day.

This robust feed pusher can easily push versatile types of feeding, including large quantities of hay or silage. With its compact and user-friendly design, the Ranger will save you time and money!

BouMatic Ranger allows you to reduce labour costs and positively impact milk production.

- **Programmable** – Guiding system consists of 1/8 in x 1/2 in (3 x 13 mm) magnetic strip inserted into grooved floor to create a safe and precise route in your barn with an easy to use keyboard.
- **Improves milk production** – Full consumption of feed ration increases milk yield by up to 1 liter per cow and day. The pusher keeps feed to the cow to allow her to eat at any time of the day.
- **Herd Health** – With having a steadier access to feed, all cows in the herd can eat the ration they need for optimal rumen health and growth.
- **Saves Time** – Ensures that feed is being pushed continually, can save up to 180 man-hours a year to be spent on other jobs.
- **Saves Fuel** – A tractor is no longer needed to push feed, saving fuel costs.
- **Less Feed Waste** – Feed waste can be reduced by an average of 75%; the feed is always in reach, so the cows are encouraged to eat more often.
- **Charging Station** – Options available to have multiple charging stations.
- **Manual Mode** – User-friendly remote control available.
